

Solar Pond Building

Herrick Archives Building S 110

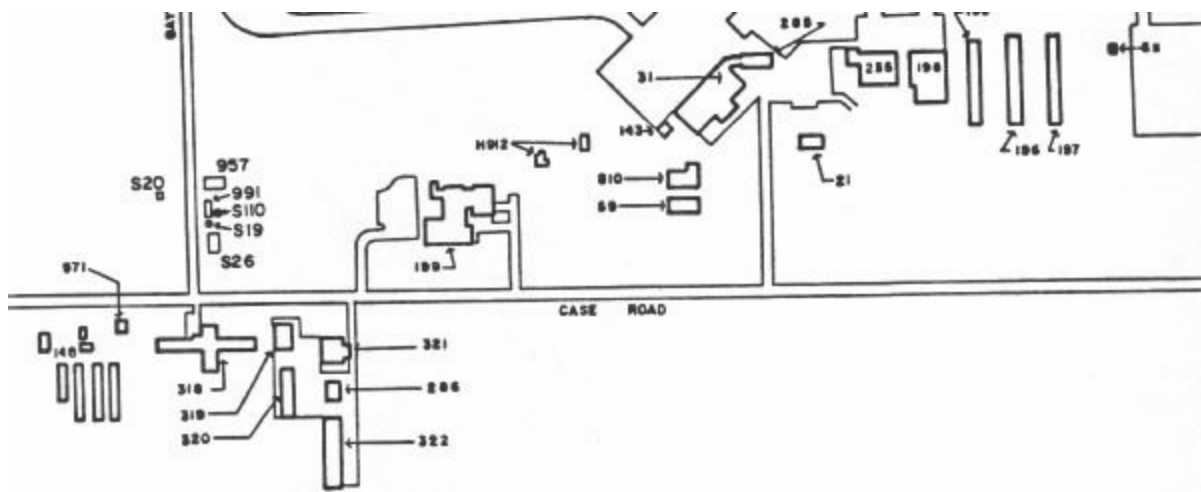

A. IDENTIFICATION & LOCATION

This is a circular metal corn crib constructed late in 1977 or early in 1978 at the Farm Science Review site at Don Scott Field. It was erected for use in connection with a study of "Salt-Gradient Solar Pond Development" under a project sponsored by the U.S. Department of Energy with Professor Carl Nielsen as the project supervisor.

The building was initially used for drying grain during the Farm Science Review, using heat from the adjacent solar pond. Since the move of the Farm Science Review to Madison County, the building has been used to house instruments used in the solar pond investigation.

The building is a typical metal structure some 10 to 12 feet in diameter (no actual measurement made). See Photograph X 30151 in Photo Archives.

This building stands next to Building 991 at Don Scott Field. See map below. For indexing purposes, it is listed at 2400 W. Case Rd.

For identification of other buildings shown, see Appendix A.
